Office: products and the product card

This is an informational translation. The matching Russian revision is authoritative. Guide for Markiro Autonom office administrators and technologists: the list of products, a new card, the GTIN and its owner, completing a draft until it is active, the photo, default templates and counterparty, and archiving.

1. Purpose

This instruction covers the «Товары» (Products) section of the Markiro Autonom office: creating a product card, completing it and taking a product out of use. Shifts are planned for active products only — see MKR-INS-08.

The application interface is in Russian only, so the screenshots show the Russian screens. Interface labels are quoted in Russian, followed by an English gloss in parentheses.

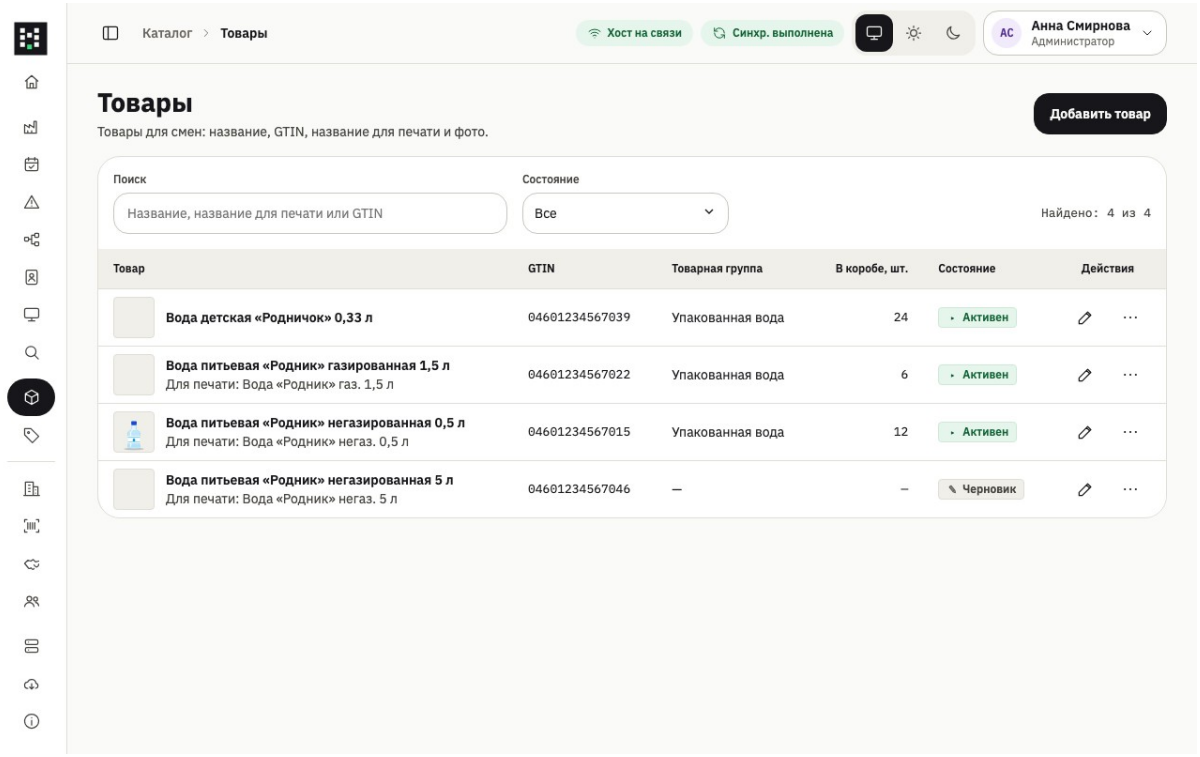

Both office roles — administrator and technologist — create and change products. Only the administrator changes the counterparties and the organization profile on which the GTIN owner depends.

Note: The screenshots were taken on a demonstration site. Your names, GTINs and quantities will differ.

2. The list of products

Step 1. Open the «Товары» (Products) section

The section lists the products for shifts: name, GTIN, print name and photo. The table shows the photo and the name with the print name, GTIN, «Товарная группа» (Product group), «В коробе, шт.» (Per box, pcs) and «Состояние» (State) — «Активен» (Active), «Черновик» (Draft) or «В архиве» (Archived). «Поиск» (Search) looks in the name, print name and GTIN; «Состояние» filters by state.

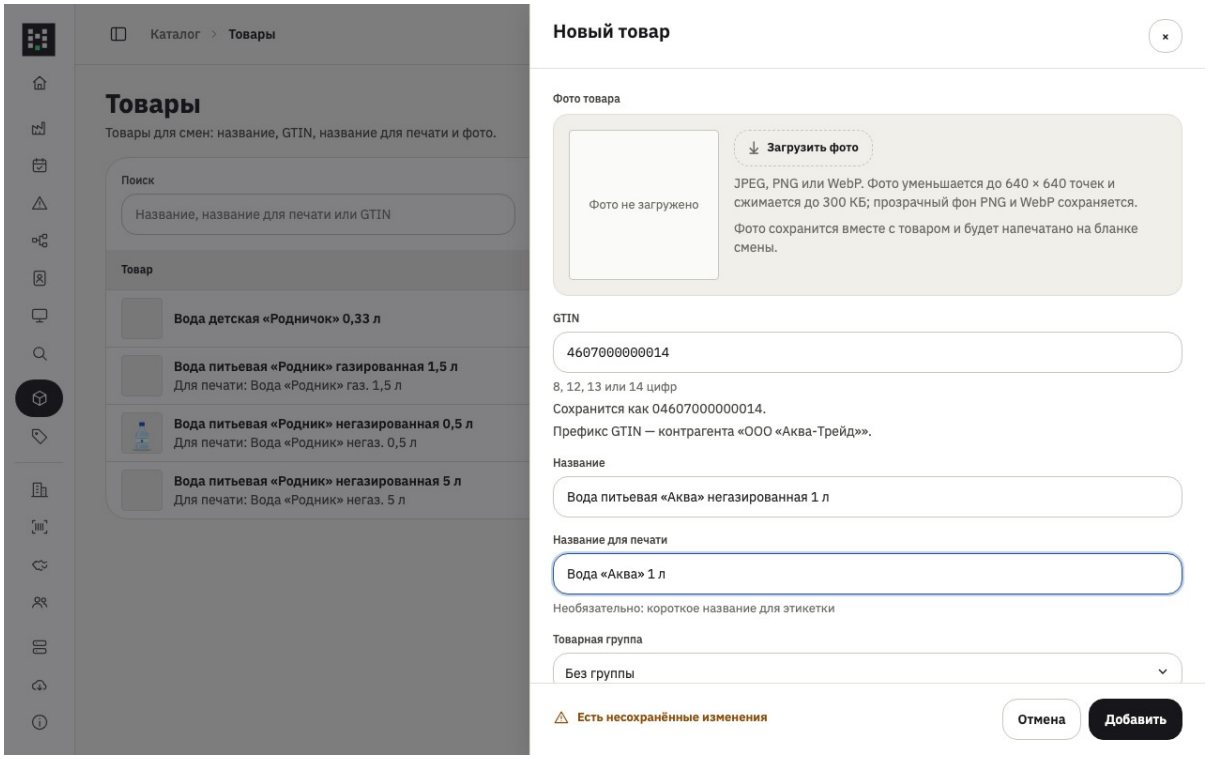

The «Товары» (Products) section

3. A new product

Step 1. Create a card

Click «Добавить товар» (Add product) — «Новый товар» (New product) opens on the right. Enter «GTIN» — 8, 12, 13 or 14 digits. The office pads a short GTIN with zeros and shows how it will be saved: «Сохранится как …» (Will be saved as …). Then «Название» (Name) and, if needed, «Название для печати» (Print name) — an optional short name for the label. Click «Добавить» (Add).

New product: GTIN, owner and names

Expected result: The office reports «Товар «...» добавлен.» (Product «...» added.)

Step 2. Check the GTIN owner

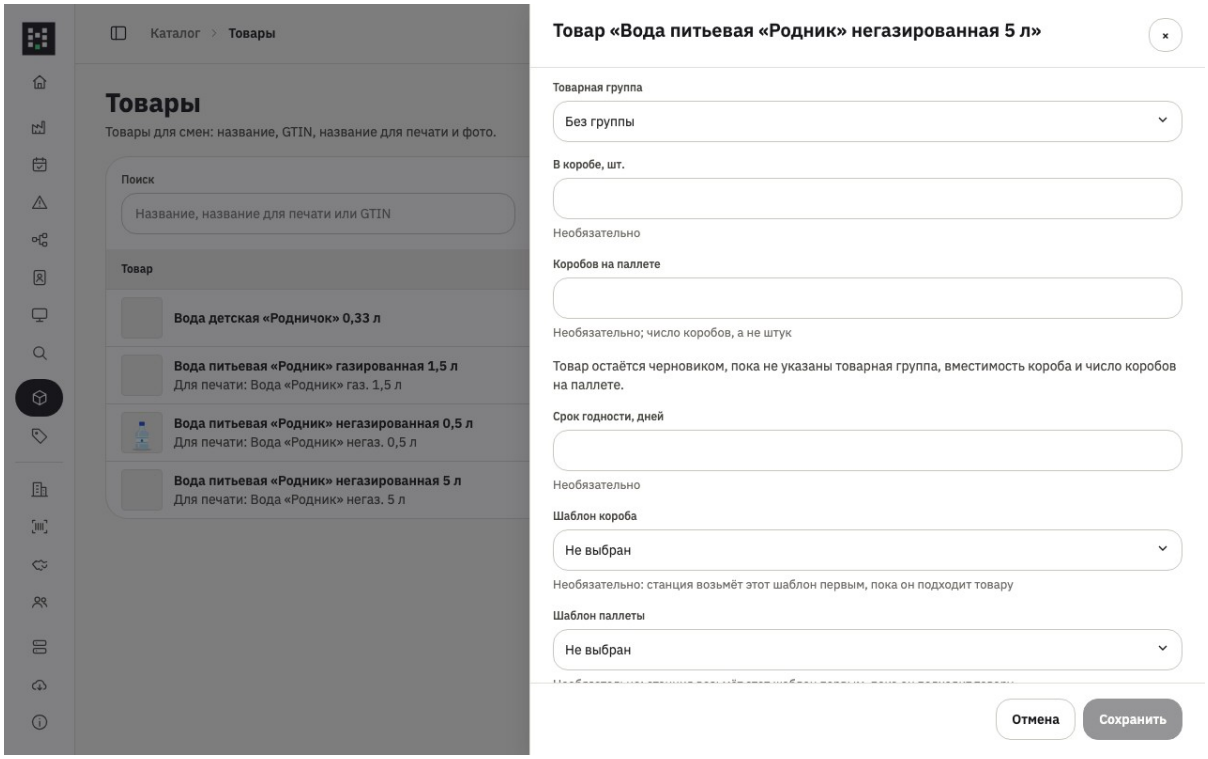

Under the GTIN the office states whose number it is, by GS1 prefixes: the organization's, a counterparty's (named), or «Владелец GTIN не определён» (GTIN owner not determined) when the prefix matches neither. The organization's prefixes are set in «Профиль» (Profile), «Префиксы GS1» (GS1 prefixes); counterparties' prefixes in the «Контрагенты» (Counterparties) section. The note does not prevent saving: it helps to notice a foreign or mistyped number.

Important: One GTIN cannot belong to two products in use: the office answers «Этот GTIN уже у товара в работе» (This GTIN already belongs to a product in use). An archived product's GTIN is not checked and does not take the number.

4. Draft and active

Step 1. Fill in the fields without which a product stays a draft

While the card is incomplete, a note says the product stays a draft until the product group, the box capacity and the boxes per pallet are set. Fill in «Товарная группа» (Product group), «В коробе, шт.» (Per box, pcs) and «Коробов на паллете» (Boxes per pallet; boxes, not units) and click «Сохранить» (Save) — the product becomes «Активен» (Active).

A draft: product group and capacities not set

Expected result: The product's state in the list is «Активен» (Active).

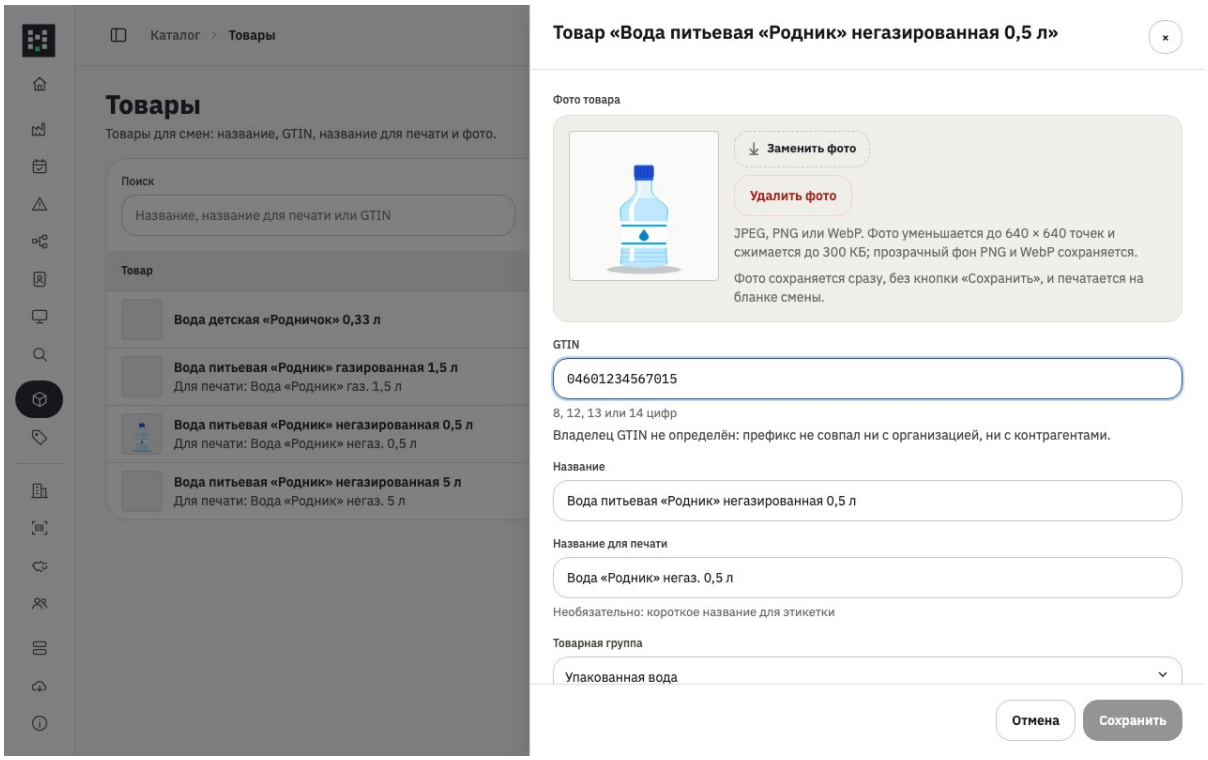

«Срок годности, дней» (Shelf life, days) is optional; the station takes it from the card when it prints labels. For a product group that needs an EGAIS code, the «Код ЕГАИС» (EGAIS code) field appears; it is printed on box and pallet labels and usually has 19 digits.

Note: A draft cannot be chosen for a shift: it is not in the «Новая смена» (New shift) form's list. If the product of an already planned shift becomes a draft, the list of shifts shows «Не откроется: товар — черновик» (Will not open: the product is a draft).

5. Photo, templates and counterparty

Step 1. Add a product photo

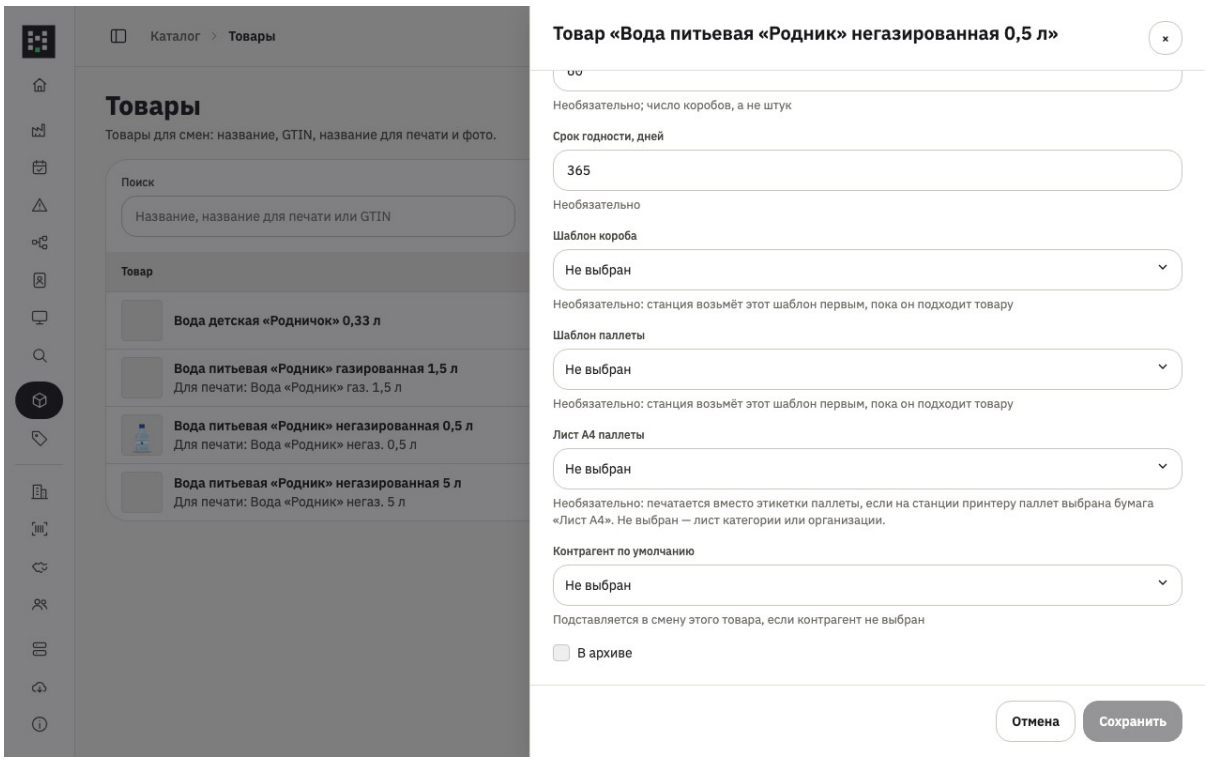

The pencil in a product's row opens its card. At the top is «Фото товара» (Product photo): «Загрузить фото» (Upload photo), and for a product with a photo «Заменить фото» (Replace photo) and «Удалить фото» (Delete photo). JPEG, PNG or WebP; the photo is reduced to 640 × 640 pixels and compressed to 300 KB, keeping a transparent PNG or WebP background. For an existing product the photo is saved at once, without «Сохранить» (Save), and is printed on the shift sheet.

Product card with a photo

Step 2. Set the defaults

At the bottom of the card are «Шаблон короба» (Box template) and «Шаблон паллеты» (Pallet template) — optional: the station takes this template first while it fits the product — «Лист А4 паллеты» (A4 pallet sheet) and «Контрагент по умолчанию» (Default counterparty), which is filled into this product's shift when no counterparty is chosen. These values are filled into the shift form and can be changed there (MKR-INS-08).

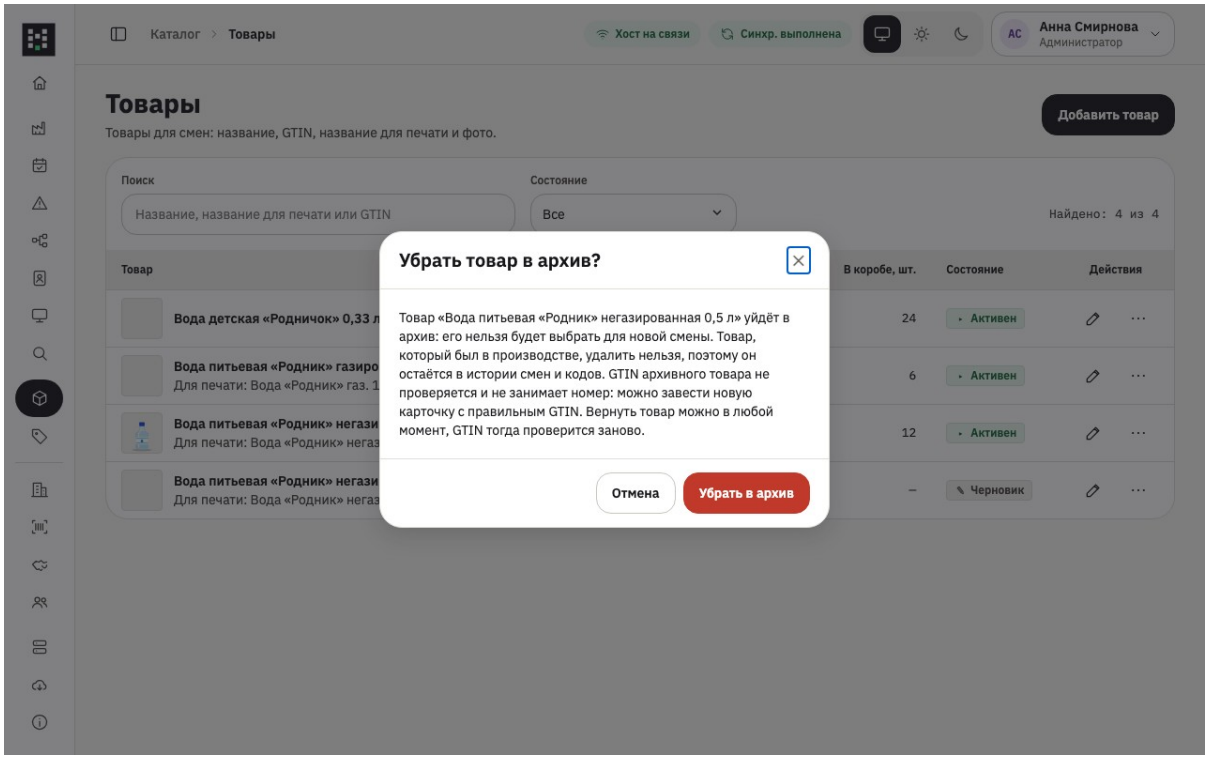

Templates, A4 sheet and default counterparty

A template not set in the card is taken by the station from the default templates — the product category's, then the organization's. They are set in the «Шаблоны» (Templates) section.

6. Taking a product out of use

Step 1. Archive the product

«…» menu in a product's row → «Убрать в архив» (Archive), or the «В архиве» (Archived) checkbox in the card. The office explains that the product goes to the archive and can no longer be chosen for a new shift, and that a product that has been in production cannot be deleted, so it stays in the history of shifts and codes.

Confirming the archive

Expected result: The product's state is «В архиве» (Archived).

A card cannot be deleted — only archived. If the GTIN was mistyped, archive the product and create a new card with the correct GTIN. «Вернуть из архива» (Restore from archive) puts the product back in use; its GTIN is then checked again and must not belong to another product in use.

7. Frequently asked questions

The product cannot be chosen for a shift — It is a draft or archived. Fill in the product group and both capacities, or restore the product from the archive.

The GTIN owner is not determined — The GTIN's prefix matches neither the organization's «Префиксы GS1» (GS1 prefixes) nor the counterparties' prefixes. Check the GTIN and the prefixes.

The «С паллетами» checkbox is unavailable in a shift — The product has no «Коробов на паллете» (Boxes per pallet). Set it in the card.

The photo is not on the shift sheet — A new product saves its photo together with the card; if it did not upload, the office says so — open the product and upload the photo again.

If your problem is not described above, contact Markiro support: hello@v-b.tech.
