1. General provisions and controller

The controller for markiro.app is Богатырев Владислав Сергеевич, address: 353745, Краснодарский край, Ленинградский район, ст. Ленинградская, ул. Грузская, д. 26. Requests may be sent to hello@v-b.tech or made by phone at +7 934 355-14-90.

This policy covers the public website, demonstration-request form, and cases where Markiro independently determines processing purposes. Tenant employee data is addressed separately in section 12.

2. Terms and principles

Personal data — information relating to an identified or identifiable person.

Processing — any operation performed on personal data, by automated or non-automated means.

Tenant — an isolated customer organization in Markiro that determines purposes for data concerning its staff and other persons.

Processing is lawful, fair, purpose-limited, data-minimized, accurate, retention-limited, and protected against unauthorized access.

3. Data subjects, data, and sources

Data subjects include website visitors and organization representatives requesting a demonstration, and platform users where Markiro acts as an independent controller.

The form collects directly from the visitor a name, company, email address, and optional phone number. It also records the source page, request identifier, consent revision, and bounded anti-abuse and captcha technical data. These fields are not used for hidden profile enrichment.

4. Purposes and legal bases

- responding to the visitor and clarifying their needs;
- arranging a Markiro demonstration;
- sending a transactional receipt confirmation;
- preventing automated abuse and protecting service security;

- performing a contract, meeting a mandatory legal duty, or defending legitimate claims only where that basis actually applies.

Form data relies on separate consent MKR-PD-02/2026.08/01. This revision provides no advertising, marketing mail, web analytics, profiling, lead enrichment, or CRM forwarding.

5. Processing operations

The controller may collect, record, organize, accumulate, store, correct, retrieve, use, transmit to engaged processors within the stated scope, restrict, erase, and destroy data. Processing is mixed: automated and, when correspondence is reviewed, non-automated.

6. Retention, restriction, and destruction

A business request and related correspondence are retained for no more than one year after the last substantive contact unless a contract, mandatory law, or an active claim provides another documented basis. Data are then erased or destroyed, or temporarily restricted while a substantiated request is assessed.

The encrypted operational mail-delivery copy has a much shorter lifecycle: its payload is erased after a terminal result and the bounded technical delivery row is later cleaned up. That shorter period does not replace deletion of the mailbox correspondence at the one-year boundary.

7. Recipients and service providers

As needed, Yandex Cloud services may host infrastructure and secrets, Postbox may send transactional mail, SmartCaptcha may protect the form, and the controller's mailbox provider may receive and retain correspondence. Provider legal names and roles must be checked against active contracts before publication and whenever the service set changes.

Engaged parties receive only necessary data and process it under a contract, instruction, or their published terms within an applicable legal basis. The controller does not sell personal data.

8. Localization and international transfer

The initial recording, organization, accumulation, storage, correction, and retrieval of Russian citizens' personal data use databases located in the Russian Federation.

No cross-border transfer is intended in this configuration. Before any future activation, the controller will assess recipients, legal grounds, and mandatory procedures, update this policy, and give required information to data subjects.

9. Security and incidents

Measures include access control, tenant isolation, encryption of sensitive operational data, logging, backups, change control, retention limits, and incident response. Measures are reviewed against data sensitivity and current threats without publishing exploitable detail.

For a confirmed breach, the controller contains the impact, preserves necessary evidence, performs legally required notifications, and informs affected participants where applicable.

10. Data-subject rights and requests

A data subject may request information, correction, restriction or erasure, object where the law provides, and withdraw consent. Requests go to hello@v-b.tech or the controller's postal address. To protect data, the controller may request enough information to verify identity and locate the request.

Withdrawal does not invalidate processing performed before it was received. Limited processing may continue where law, a contractual claim, or the defense of rights requires it, with an explanation relevant to the request.

11. Cookies, technical data, and SmartCaptcha

The site sets no analytics or advertising cookies. Strictly necessary browser and server data may be processed. When submission is enabled, SmartCaptcha may receive an IP address and network metadata, browser and device characteristics, referrer, time zone, request time, verification token, and provider cookies needed to detect automated requests.

Captcha code loads only when online submission is enabled. Any future non-essential storage or tracking requires a separate choice mechanism before launch.

12. Data inside a tenant

When a tenant organization determines purposes and scope for its employees' data, that tenant remains the controller. It is responsible for lawful grounds, notices, required consents, accuracy, instructions, and decisions on data-subject requests.

For that processing, Markiro acts on the tenant's documented instruction and remains responsible for instruction compliance, confidentiality, security, engaged-processor control, incident notice, request assistance, and data return or deletion. Markiro is an independent controller for its separately determined purposes.

13. Revisions and authoritative text

Document code: MKR-PD-01; revision: 2026.08/01; effective date: 15 August 2026. A replacement is published as a distinct revision with its own date and supersession link.

The Russian text is authoritative. This English text is an informational translation of the matching Russian revision.
