

Cabinet: preparing and launching an inventory

This is an informational translation. The matching Russian revision is authoritative. Manager's guide: creating an inventory task, ordering the Chestny ZNAK exports, fixing the snapshot, checking terminal access and launching the task.

Document code	MKR-INS-06

1. Purpose

An inventory is a full recount of products. The manager prepares the task in the cabinet: picks a product and a line, loads the Chestny ZNAK exports, fixes a snapshot of the expected codes and launches the task. After the launch, operators perform the recount on the terminals — their work is covered by instruction MKR-INS-05.

Preparation runs through five steps: “Parameters”, “Chestny ZNAK exports”, “Snapshot review”, “Stations”, “Launch”. The cabinet walks you through them in order and does not let you launch the task until the previous steps are finished.

Note: The screenshots use demo data. The organization, product and line names in your cabinet will differ.

2. Creating the task

Step 1. Open the “Inventories” section

In the cabinet's side menu choose “Inventories”. The list shows every task with its number and status, product and dates, line and inventory mode.

The inventory list

Step 2. Set the parameters

Press “Create inventory” and fill in the task parameters: the product (exactly one), “Inventory mode” — “Without repacking” or “With repacking”, the line, the “Box label template” and the production date range: “Production date from” and “Production date to”. The period is applied inclusively.

Expected result: The cabinet saved the parameters and moved on to the “Chestny ZNAK exports” step.

MKR-INS-06 · 2026.09/01 · 10 September 2026 · Page 2

Note: The mode defines the operators' work: “Without repacking” means scanning only, “With repacking” means products are moved into new boxes and labels are printed for them. The label template is needed exactly for the second mode.

3. Chestny ZNAK exports

The snapshot of expected codes is assembled from Chestny ZNAK exports: a separate result is required for each of the six statuses — “Emitted”, “Introduced”, “Applied”, “Retired”, “Written off”, “Disaggregated”. An empty export with zero rows counts as successful: it means there are no codes in that status.

Step 1. Order the exports from Chestny ZNAK

Press “Order from Chestny ZNAK” — the cabinet orders the reports for all six statuses and downloads the finished files itself. While the order is running, a progress marker appears next to the status; once the file has been received and imported, the status card shows “Ready”, and until then it shows “Missing”.

Exports by code status

Step 2. Clear whatever blocks the order

If ordering is unavailable, the cabinet lists one or more possible reasons — there can be several at once: “Enter the organization's INN in company details”, “Set the Chestny ZNAK product group on the product card”, “Pair a signer agent under Integrations”, “Refresh the True API token under Integrations”. The

screenshot shows only one of them — your reason, or your set of reasons, may be different. Fix what is listed and order again.

Ordering the exports is blocked: one of the possible reasons

Step 3. Upload a file by hand if Chestny ZNAK refuses

For a status you could not order, drag the export file onto its card or click the card and pick a file. The maximum size is 64 MB. The message “The file did not pass validation. Check its format, status, and contents.” means the file belongs to another status or is damaged.

Important: All six statuses are required. While at least one of them has neither an ordered nor an uploaded result, you cannot move on to the snapshot review.

4. Snapshot review

Step 1. Check the six exports and fix the snapshot

Press “Review snapshot” on the previous step — the cabinet opens a summary with three tiles: “INTRODUCED” is how many codes were found in the “Introduced” status (the cabinet prints this tile heading as the raw Chestny ZNAK status code, in both languages), “Chestny ZNAK exports” shows how many of the six uploads are selected, and “Expected stock” reads “Calculated after fixation” until the snapshot is fixed. When “Chestny ZNAK exports” shows 6 / 6, press “Fix snapshot” — the server calculates the final counts and creates an immutable snapshot of the expected codes.

The snapshot review before fixation

Expected result: The snapshot is fixed and the cabinet shows the number of expected codes.

Important: A fixed snapshot cannot be changed — it defines which codes count as expected for the whole inventory. Check the set of exports before you fix it.

5. Terminals and the task form

Step 1. Check that the terminals are ready

On the “Stations” step the cabinet opens the “Station access” card — in English the cabinet calls the line terminals stations. The card shows how many terminals are assigned to the line and how many of them are online right now. The task appears on the terminals of the assigned line after the launch.

Terminal access on the line

Step 2. Print the task form

The “Open task form” button sits on the previous step, “Stations”. Press it — the A4 sheet with a barcode shown in this screenshot opens; print it. Operators scan this barcode on the terminal and the task opens automatically, with no searching in the list. The system issues this printed form in Russian only: the sheet is headed “Задание на инвентаризацию” (inventory task) whichever interface language you use, and there is no English print form yet.

Задание на инвентаризацию

Без переупаковки · Марка Ко

К ЗАПУСКУ

INVENTORY-26-0042

Отсканируйте на терминале,
чтобы открыть задание

Параметры задания

ПРОДУКТ Сироп «Клюква», 0.5 л	GTIN 04600000000006
ЛИНИЯ Линия 1	РЕЖИМ Без переупаковки
ДАТА ПРОИЗВОДСТВА 01.08.2026 - 31.08.2026	ОЖИДАЕТСЯ К ПРОВЕРКЕ 116 кодов

Как начать работу

1

Откройте терминал на выбранной линии и войдите оператором.

2

Отсканируйте штрихкод задания. На своей линии оно также будет видно в списке.

3

Если терминал относится к другой линии, подтвердите предупреждение перед входом.

4

Сканируйте коды единиц. Закрытую упаковку можно проверить одним сканированием кода упаковки.

Важные правила

MOVING_BY_UD: код в отгрузке. Его нельзя учитывать, списывать или включать в документы.

При простой проверке сканирование кода коробки отмечает его известное содержимое.

Дата производства действует на терминале до следующего изменения; в одном новом коробе одна дата.

Чтобы поставить работу на паузу, выйдите из задания. Закрыть инвентаризацию можно только в админке.

На время инвентаризации движения продукции по складу остановлены.

The printed task form with a barcode

Note: Hand the printed form to the line before the launch. How operators work with it is covered by instruction MKR-INS-05.

6. Launch

Step 1. Stop the warehouse movements and launch

On the “Launch” step the cabinet shows how many codes the snapshot expects and requires you to confirm that warehouse movements are stopped. Tick “Warehouse movements are stopped” and press “Start inventory”.

Launching the inventory

Expected result: The task is launched and has appeared on the terminals of the line.

Important: Receiving and shipping during the recount create discrepancies that then have to be sorted out by hand. Stop the movements before the launch, not after it.

Watching the progress, making corrections, closing the inventory and the final documents are covered by a separate instruction on monitoring and closing.

7. Common questions

The product you need is in the list but cannot be selected — A product with the “Draft” status is visible in the list but cannot be selected: its catalog card has no Chestny ZNAK product group, box capacity or pallet capacity. Fill in the missing fields — the status changes to “Active” and the product becomes selectable. Products marked “Not in use” are selectable as they are: the inventory is the only place in the cabinet where an archived product can be taken into a task, so that the stock of a discontinued product can be counted.

Chestny ZNAK rejected the order for a status — Upload the file for this status by hand — the cabinet offers exactly that route in the error message.

The export file does not pass validation — Check that the export was made for the right status and product and has not been edited. The maximum file size is 64 MB.

The terminals are offline before the launch — You can still launch the task, but operators will only see it once the terminals reconnect. Check the connection on the line before work starts.

You got the parameters wrong after fixing the snapshot — The snapshot is immutable. Create a new task with the correct parameters; the wrong task stays in the list with the “Ready to start” status — do not launch it.

If your problem is not listed above, contact Markiro support: hello@v-b.tech.
