Office: a shift's course, closing and exports

This is an informational translation. The matching Russian revision is authoritative. Guide for Markiro Autonom office administrators and technologists to the second half of a shift's life: the production overview, the shift card and its sections, closing a shift in the office, data arriving after closing, exports for GIS MT and 1C, and why a format is unavailable.

Document code	MKR-INS-09
Revision	2026.10/01
Effective from	29 October 2026
Revision verification	https://markiro.app/d/MKR-INS-09/2026.10/01/29.10.2026
Language	EN
Operator	Богатырев Владислав Сергеевич

1. Purpose

This instruction covers work in the Markiro Autonom office while a shift runs and after it ends: the production overview, the shift card, closing a shift in the office, and exporting files for GIS MT and the accounting system. Shift planning is covered by MKR-INS-08; the operator at the station opens the shift, runs the work cycle and usually closes the shift — see MKR-INS-01 and MKR-INS-02.

The application interface is in Russian only, so the screenshots show the Russian screens. Interface labels are quoted in Russian, followed by an English gloss in parentheses.

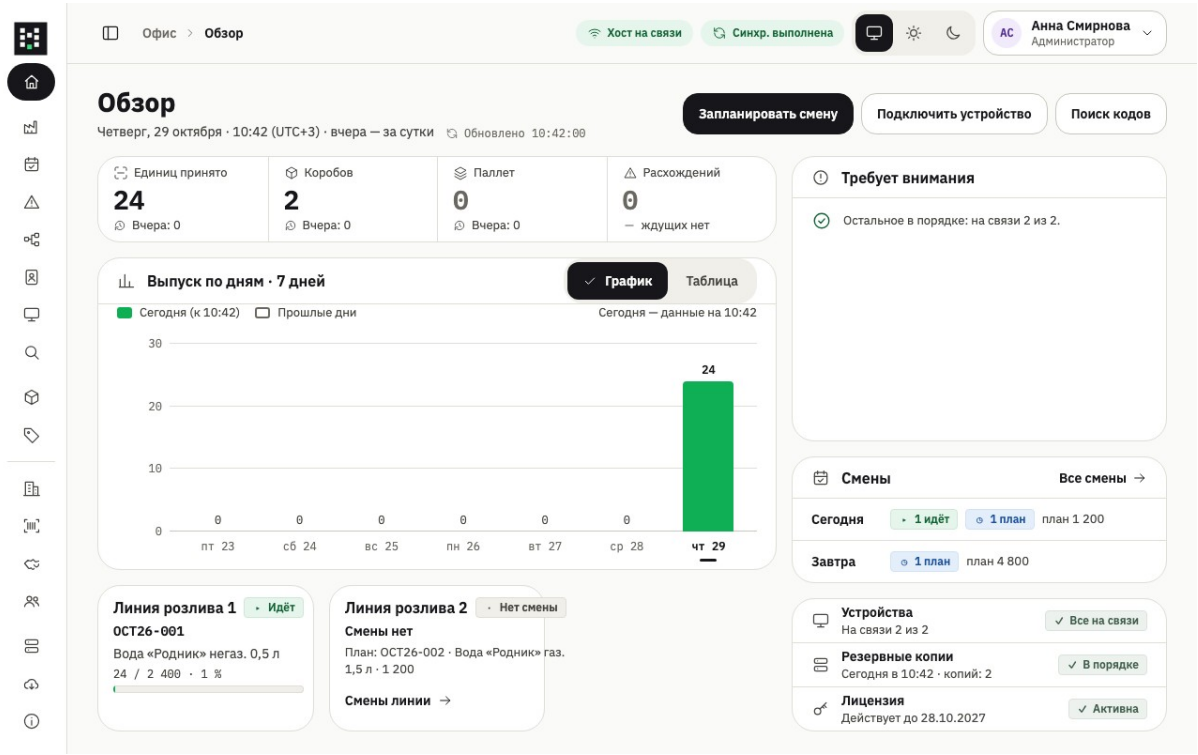

Everything below concerns shifts in the «Активна» (Active) and «Закрыта» (Closed) states. Both office roles — administrator and technologist — can follow a shift and export files; anyone who plans shifts can close a shift in the office and give a reason.

Note: The screenshots were taken on a demonstration site. Your names, numbers and quantities will differ.

2. Production overview

Step 1. Start the day with «Обзор» (Overview)

«Обзор» (Overview) opens first after signing in. At the top are the day's figures: «Единиц принято» (Units accepted), «Коробов» (Boxes), «Паллет» (Pallets) and «Расхождений» (Discrepancies), compared with yesterday. Below are «Выпуск по дням · 7 дней» (Output by day · 7 days) and the line cards: shift, product and plan progress. On the right are «Требует внимания» (Needs attention), the «Смены» (Shifts) summary for today and tomorrow, and «Состояние системы» (System state): devices, backups and the license.

The «Обзор» (Overview) section

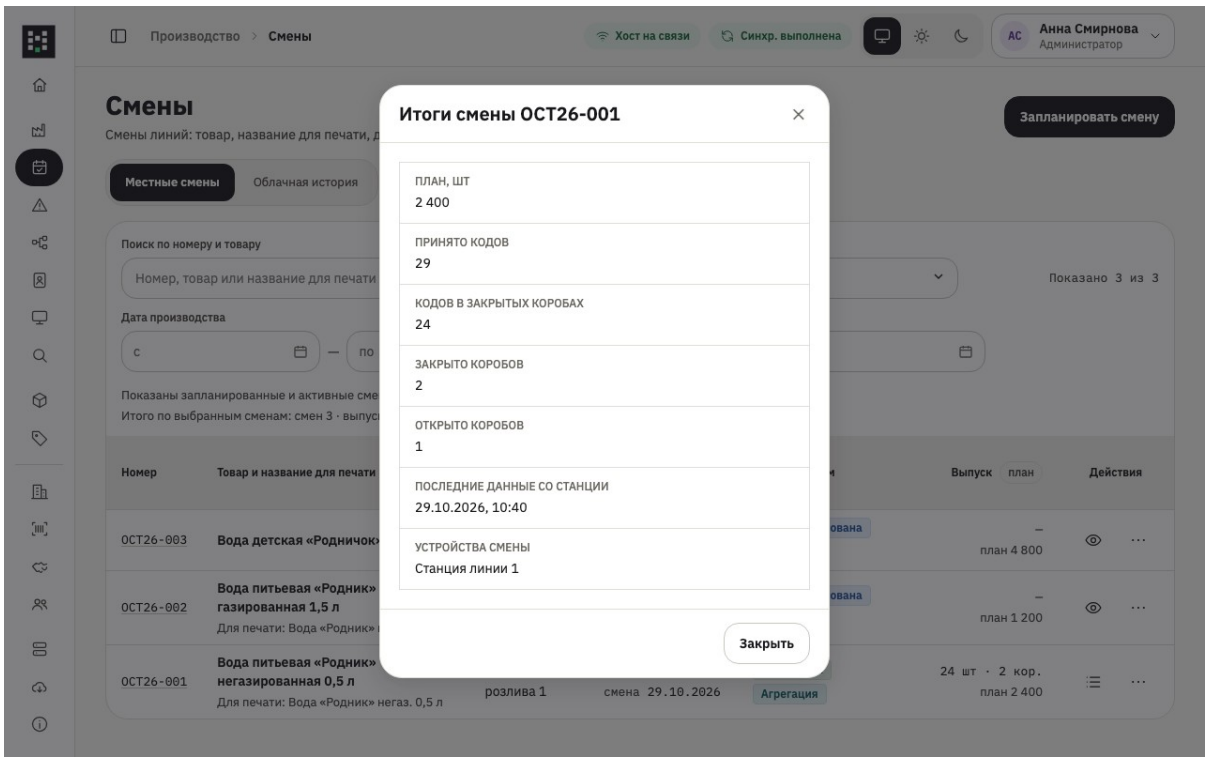

«Требует внимания» (Needs attention) gathers what waits for a person: code discrepancies, devices without a link, backups not made or out of date. When all is calm it reads «Остальное в порядке» (Everything else is fine). The button next to a message leads to the place where it is dealt with.

Note: Stations keep working without a link to the host: scans accumulate at the station and reach the host when the link returns. So an active shift's figures in the office may lag behind the station — no data is lost.

3. The shift card

Step 1. Look at the shift's totals

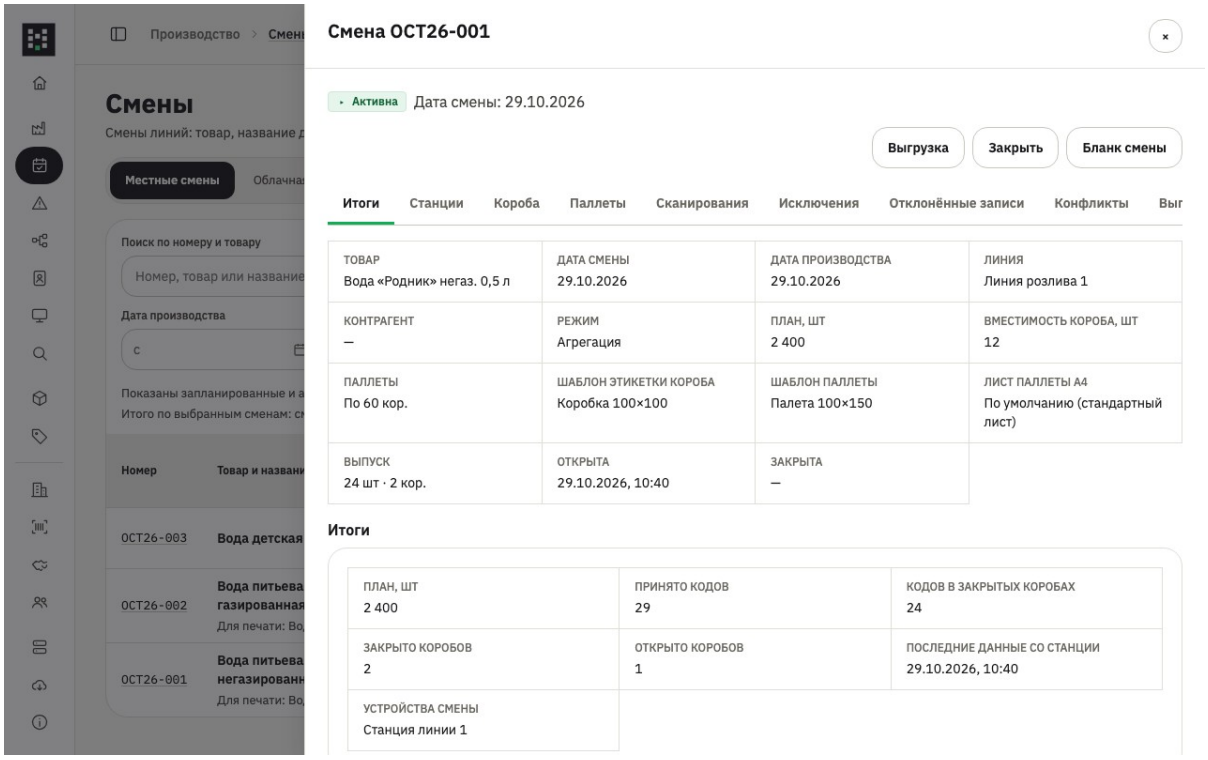

In the «Смены» (Shifts) section the list icon in the row of an active or closed shift opens «Итоги смены …» (Totals of shift …): plan, codes accepted, codes in closed boxes, boxes closed, boxes open, the last data from the station and the shift's devices.

The «Итоги смены» (Shift totals) window

Step 2. Open the shift card

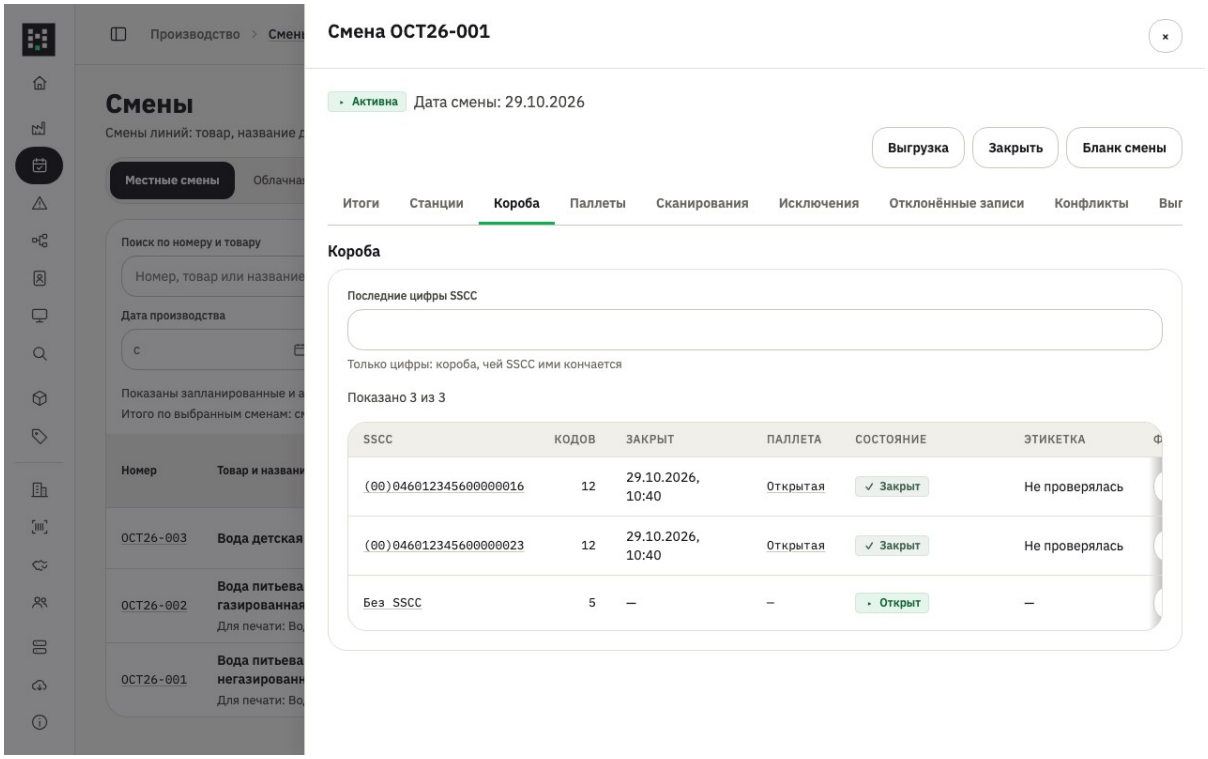

The shift number in the list opens its card. At the top are the status and shift date and the «Выгрузка» (Export), «Закрыть» (Close) and «Бланк смены» (Shift sheet) buttons; below are the shift's sections: «Итоги» (Totals), «Станции» (Stations), «Короба» (Boxes), «Паллеты» (Pallets), «Сканирования» (Scans), «Исключения» (Exceptions), «Отклонённые записи» (Rejected records), «Конфликты» (Conflicts) and «Выгрузки» (Exports). A Validation shift has no boxes, pallets or exceptions; «Паллеты» exists only for a shift with pallets, «Станции» once devices have entered the shift.

Card of an active shift, the «Итоги» (Totals) section

Step 3. Check the boxes

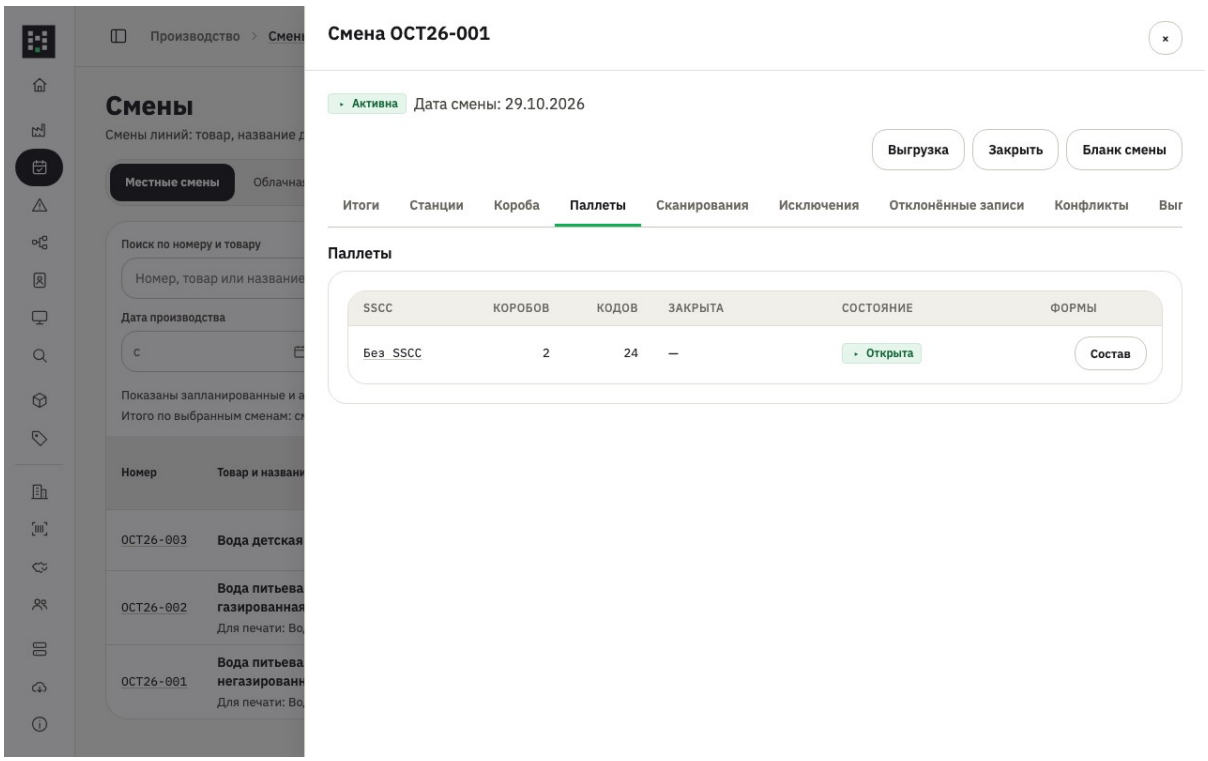

«Короба» (Boxes) lists the shift's boxes: SSCC, codes, closed at, pallet, state («Открыт» open, «Закрыт» closed or «Расформирован» disassembled) and label. An open box has no SSCC yet and reads «Без SSCC» (No SSCC). The «Последние цифры SSCC» (Last digits of the SSCC) field filters boxes by the end of the number.

The «Короба» (Boxes) section

Step 4. Check the pallets

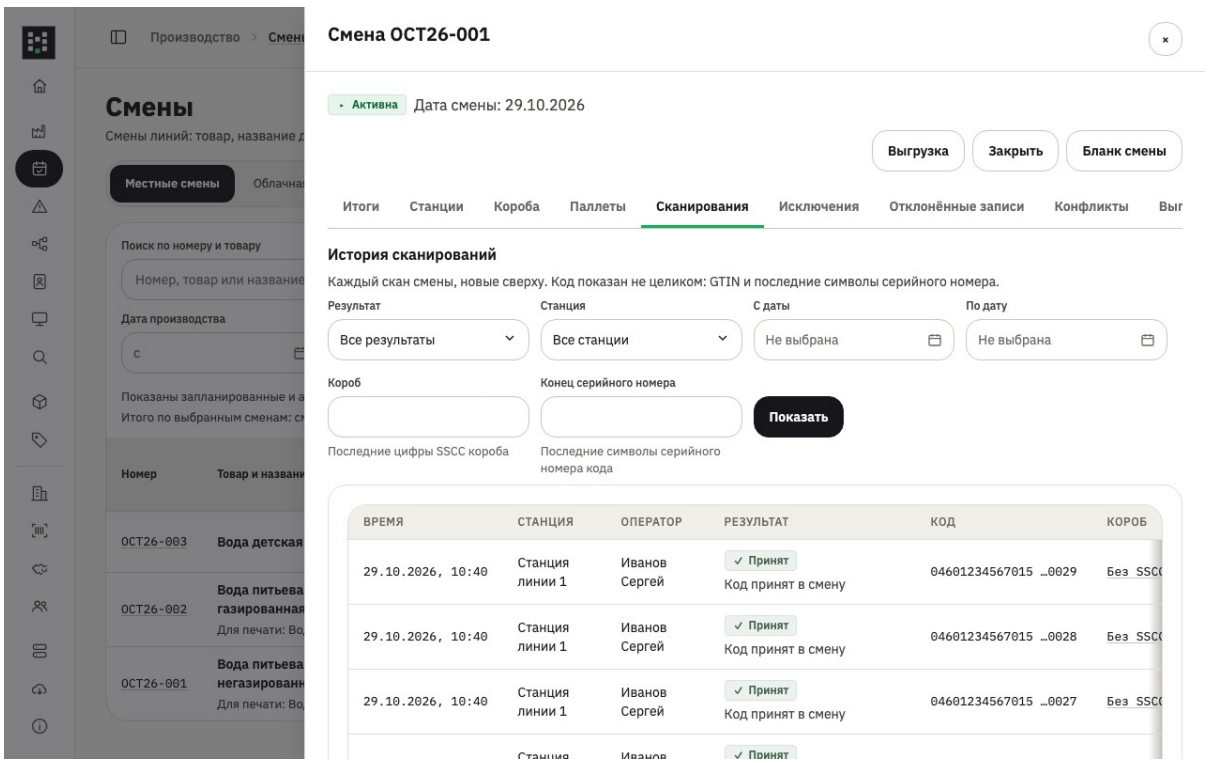

«Паллеты» (Pallets) shows every pallet of the shift: SSCC, boxes, codes, closed at, state and forms — «Состав» (Contents) and, for a closed pallet, «Ярлык» (Placard). While a pallet is being assembled it is «Открыта» (Open) and has no SSCC. The «Ярлыки паллет смены» (Shift pallet placards) button above the sections prints the placards of all pallets that have one.

The «Паллеты» (Pallets) section

Step 5. Find a scan

«Сканирования» (Scans) holds the scan history: every scan of the shift, newest first; a code is shown partly — the GTIN and the last characters of the serial number. Filters: result («Принят» accepted, «Дубликат» duplicate, «Другой товар» other product, «Не распознан» not recognised), station, dates, box and the end of the serial number; then «Показать» (Show).

The «Сканирования» (Scans) section

Stations — Devices that entered the shift: when they entered, how many codes, boxes and pallets they accepted and whether they closed their part.

Exceptions — What operators did to boxes and pallets outside the normal cycle — reprint, disassembly — with the reason, station and operator (MKR-INS-03).

Rejected records — Station records the host did not accept, with the reason. The host keeps every refusal.

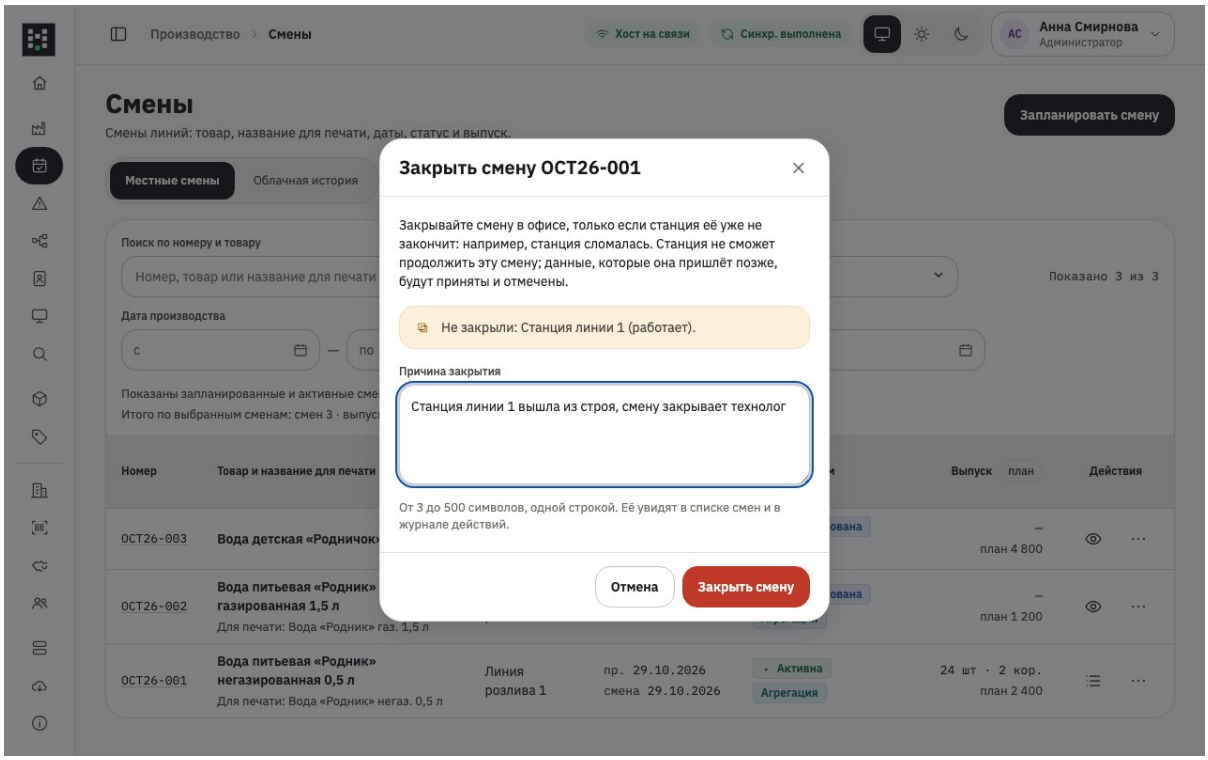

Conflicts — A code accepted by two scans: the code stays with the earliest scan and the other one lost. Such cases are dealt with in the «Конфликты» (Conflicts) section.

4. Closing a shift

Normally the operator closes the shift at the station — see MKR-INS-02. If the shift closes below plan, the station asks for the reason, and the office shows it in the list as «Причина расхождения: …» (Reason for the discrepancy: …).

Step 1. Close the shift in the office if the station will not finish it

«…» menu in an active shift's row → «Закрыть» (Close), or the «Закрыть» button in the card. The office warns: close a shift in the office only if the station will not finish it — for example, the station broke down; the station will not be able to continue the shift, and data it sends later will be accepted and marked. If devices have not closed their parts yet, the window lists them: «Не закрыли: …» (Not closed: …). Fill in «Причина закрытия» (Reason for closing) — 3 to 500 characters on one line, shown in the list of shifts and in the action log — and click «Закрыть смену» (Close the shift).

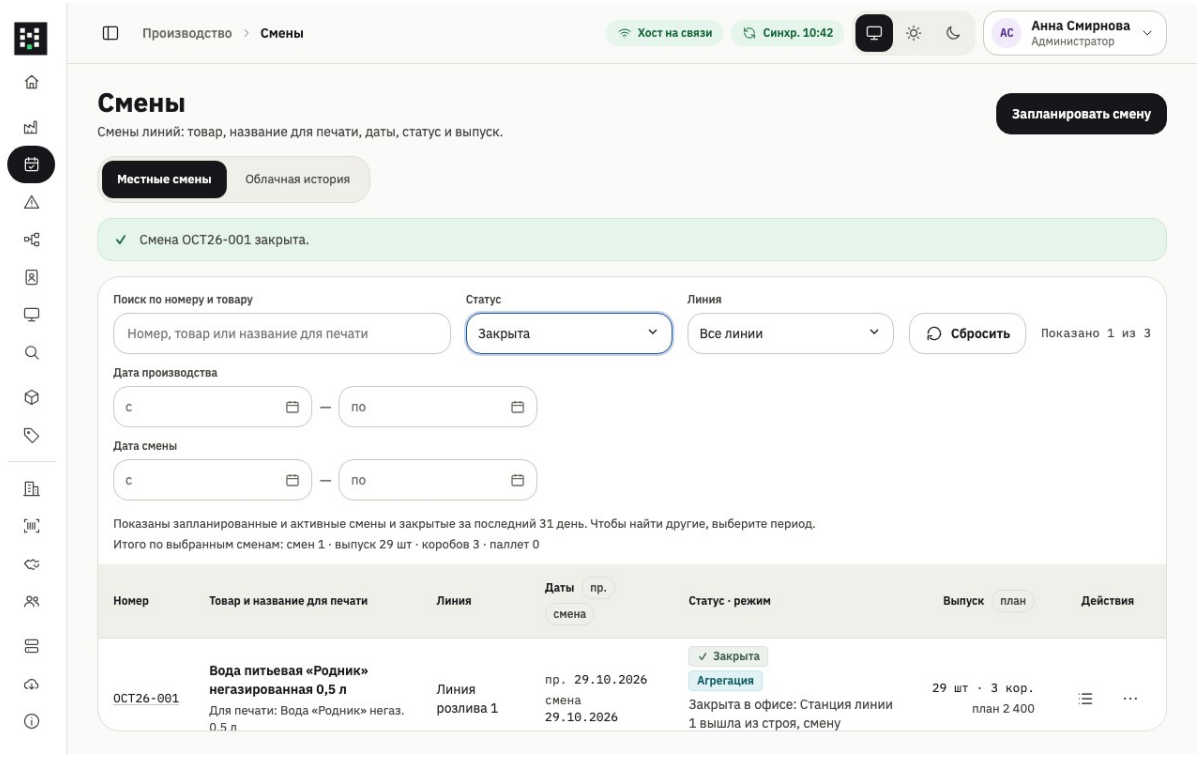

Closing a shift in the office

Expected result: The office reports «Смена … закрыта.» (Shift … closed.)

Step 2. Check the closed shift

Filter «Статус» (Status) → «Закрыта» (Closed). The closed shift's row shows the status «Закрыта» (Closed), the output, and under the status «Закрыта в офисе: …» (Closed in the office: …) with your reason.

A shift closed in the office

Important: If several devices worked in the shift, the action is called «Закрыть целиком» (Close whole): closing in the office closes the shift for all devices at once, and every device that has not closed its part is closed with it. A closed shift cannot be reopened.

If devices closed a shared shift without giving the reason for the discrepancy with the plan, the row shows «Причина не указана» (Reason not given). «...» menu → «Указать причину» (Give a reason): choose the reason from the list and click «Сохранить причину» (Save the reason) — it goes into the action log.

5. Data after closing

A station may send scans and boxes after the shift has been closed — for example, when it comes back online. The host accepts and marks them, and they do not reopen the shift. Such a shift is marked «Данные после закрытия» (Data after closing).

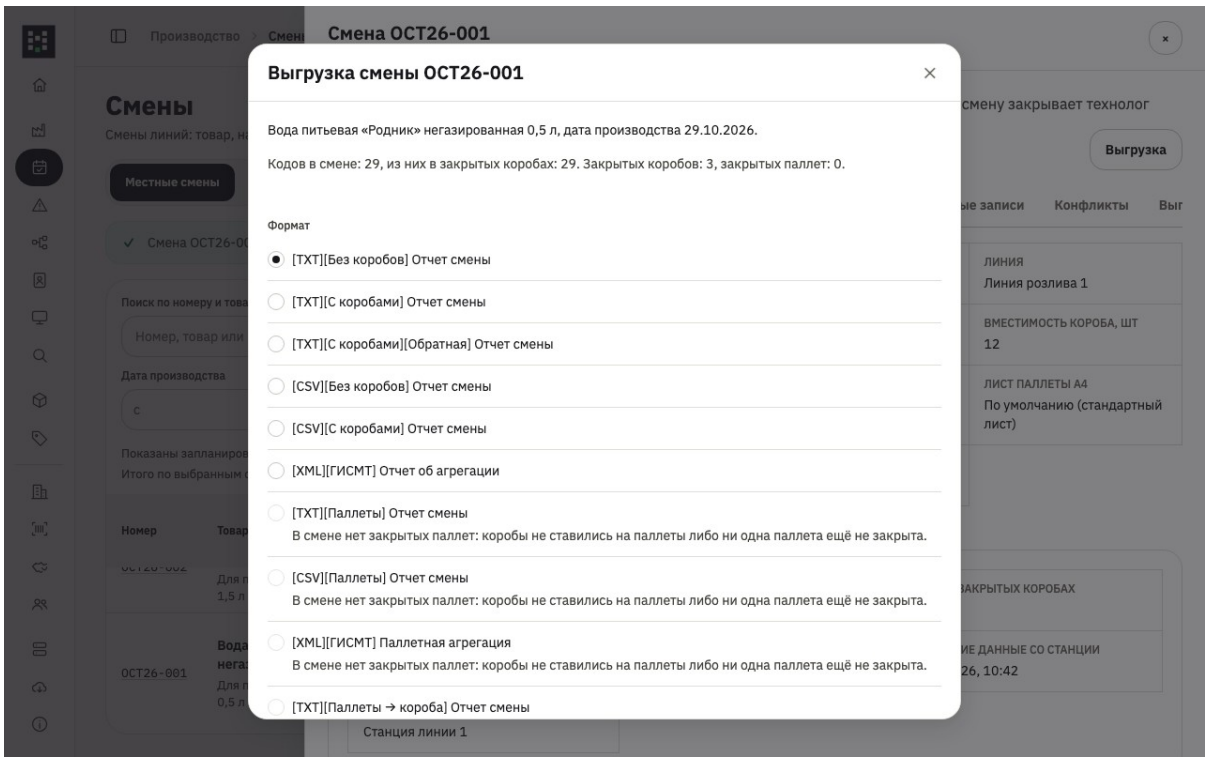

Important: An export made before the late data is out of date. The office warns about this on the next export: data arrived after the shift was closed; this export contains it, and the export made before is out of date. Make the export again and use the new file.

6. Exports for GIS MT and 1C

An export is a file with the shift's codes for loading into GIS MT or the accounting system. Files are made only for a closed shift.

Step 1. Choose a format

The «Выгрузка» (Export) button in the card, or «...» menu → «Выгрузка», opens the «Выгрузка смены ...» (Export of shift ...) window. At the top are the product, the production date and the count: codes in the shift and in closed boxes, closed boxes and pallets. Below is «Формат» (Format): an unavailable format is labelled with its reason.

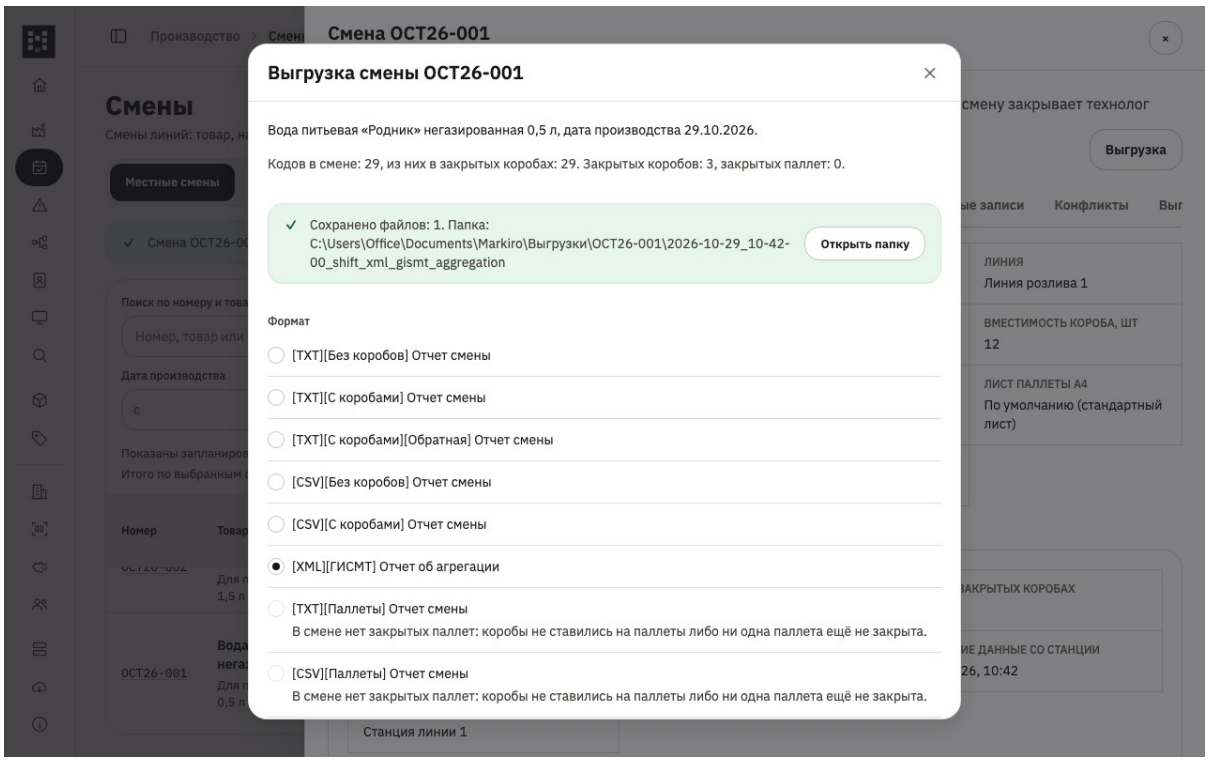

The export window: formats

Format	What the file holds
[TXT][Без коробов] Отчет смены, [CSV][Без коробов] Отчет смены	The shift's codes as a list, without boxes
[TXT][С коробами] Отчет смены, [TXT][С коробами][Обратная] Отчет смены, [CSV][С коробами] Отчет смены	Codes by box with the SSCC; the reversed layout writes a box codes first and its SSCC last
[XML][ГИСМТ] Отчет об агрегации	Box aggregation document for GIS MT
[TXT][Паллеты] Отчет смены, [CSV][Паллеты] Отчет смены, [TXT][Паллеты → короба] Отчет смены	The shift's pallets with their boxes
[XML][ГИСМТ] Паллетная агрегация, [XML][ГИСМТ] Агрегация паллет без кодов	Pallet aggregation documents for GIS MT

If the file must be loaded in parts, tick «Разделить на части» (Split into parts) and set «Строк в части, не больше» (Lines per part, at most) — a whole number from 2 to 1,000,000; a box, and a pallet with its boxes, are never split between parts. The window also lists the shift's pallets: «XML паллеты» (Pallet XML) makes a Chestny Znak document for one closed pallet.

Step 2. Make and save the files

Click «Сформировать и сохранить» (Make and save). The files are saved to the «Документы\Markiro\Выгрузки» folder of this computer, in a new folder for each export. The office shows «Сохранено файлов: … Папка: …» (Files saved: … Folder: …) and the «Открыть папку» (Open folder) button.

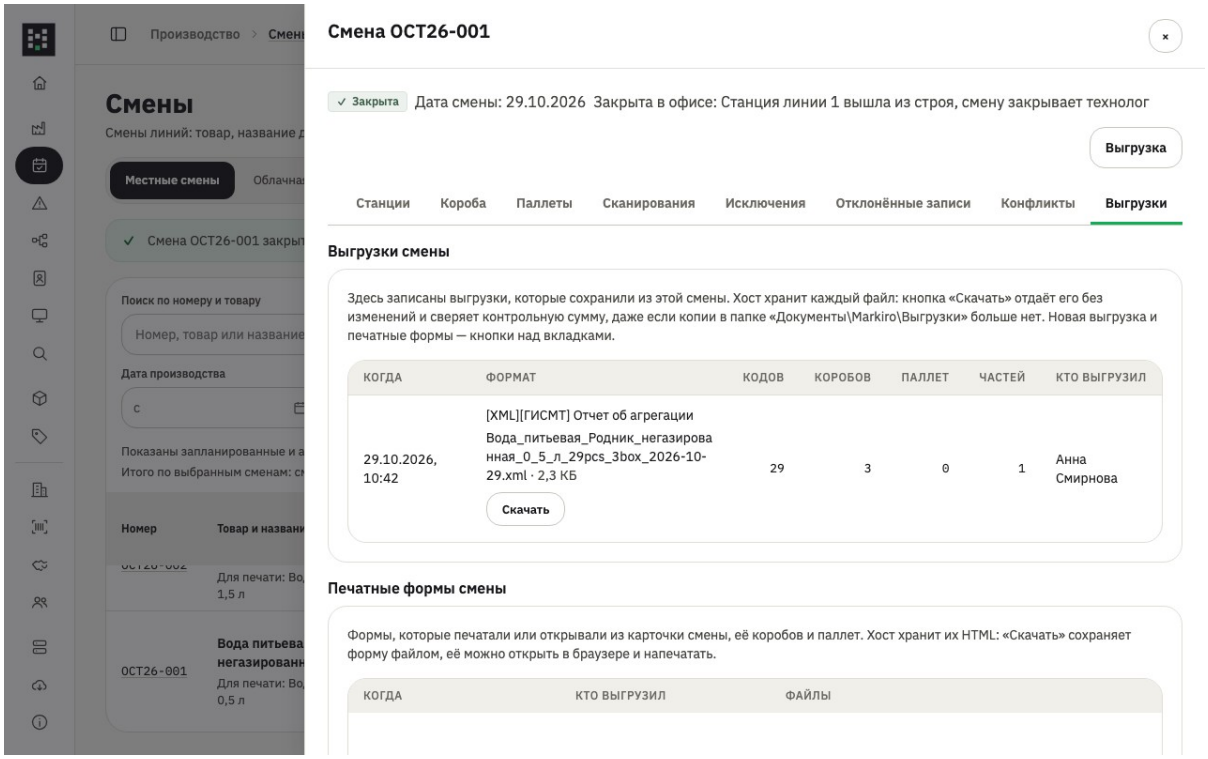

The export is saved

Expected result: The files are in a new export folder.

Step 3. Find earlier exports

The card's «Выгрузки» (Exports) section lists the shift's exports: when, which format and file, how many codes, boxes, pallets and parts, and who exported. The host keeps every file: «Скачать» (Download) returns it unchanged and checks the checksum, even if the copy on the computer is gone. Below are «Печатные формы смены» (Shift printed forms) and «Хранение файлов на хосте» (File storage on the host).

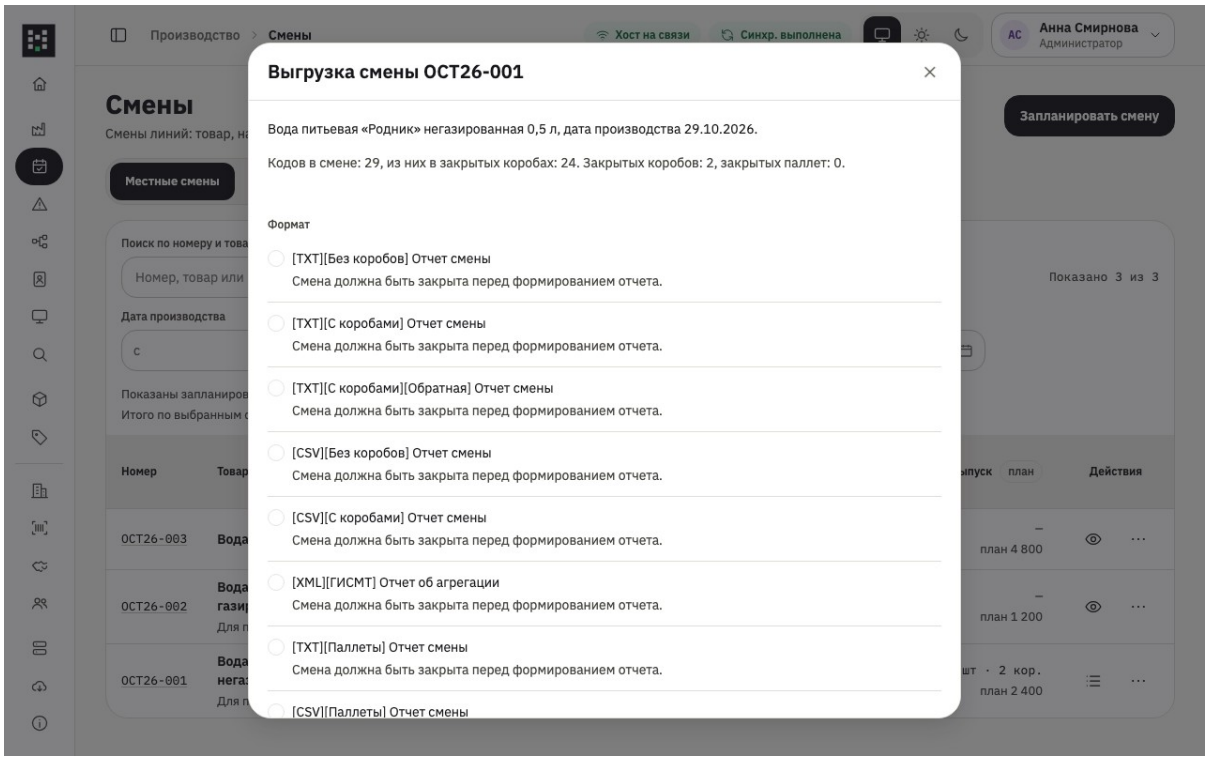

The «Выгрузки» (Exports) section of the shift card

Note: By default the host keeps files forever. The administrator sets a retention period in «Хранение файлов на хосте» (File storage on the host); a period deletes older files at once, and deleted files have to be made again. The same place sets this computer's «Папка для выгрузок» (Exports folder), a shared network folder included.

7. Why a format is unavailable

Step 1. The shift is not closed yet

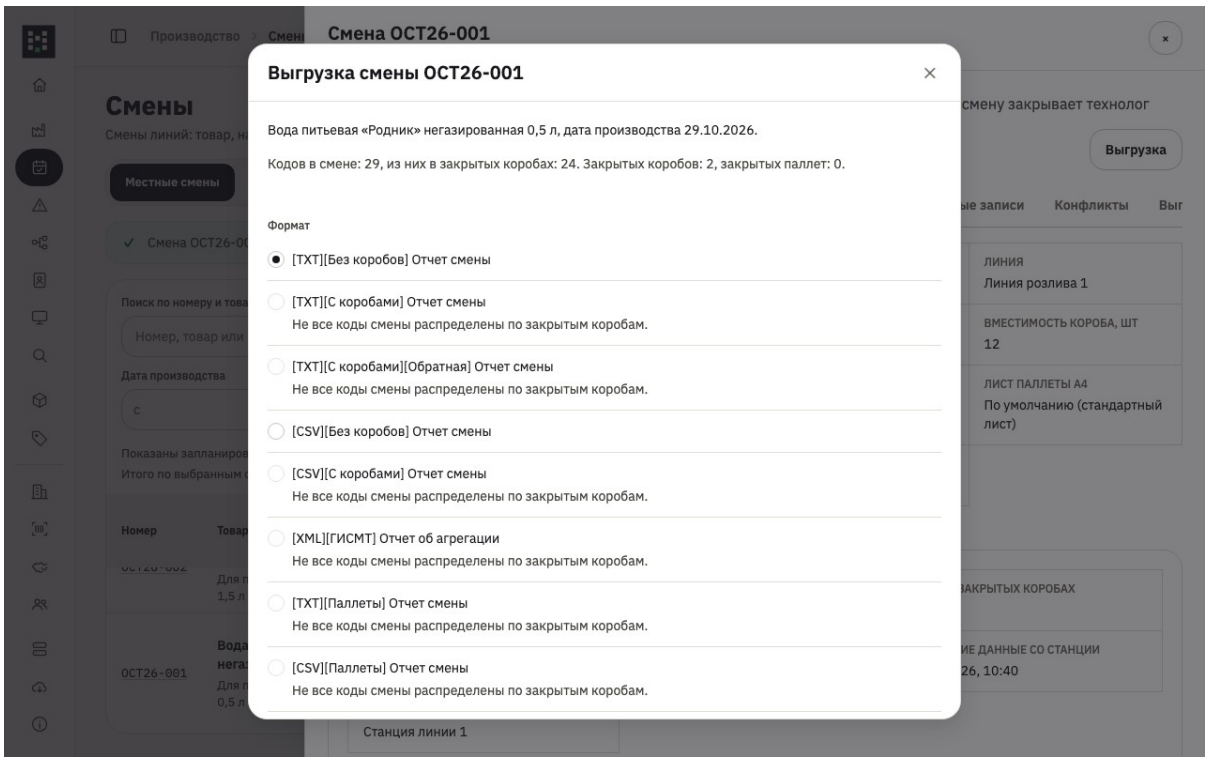

For an active shift every format reads «Смена должна быть закрыта перед формированием отчета.» (The shift must be closed before the report is made.) Wait for the station to close it or close the shift in the office (section 4).

Export of an active shift: formats unavailable

Step 2. Not all codes are in closed boxes

If the shift was closed with an open box, the box formats read «Не все коды смены распределены по закрытым коробам.» (Not all of the shift's codes are in closed boxes.) The «Без коробов» (Without boxes) formats remain available. Pallet formats need closed pallets: otherwise they read that the shift has no closed pallets — boxes were not stacked on pallets, or no pallet is closed yet.

A shift with an open box: box formats unavailable

No INN or organization name — A Chestny Znak document requires both: fill in the organization's «Профиль» (Profile). The INN must have 10 digits — a sole proprietor's INN is not accepted yet.

A box does not fit into a part — With «Разделить на части» (Split into parts), a box, or a pallet with its boxes, has more lines than the limit. Raise «Строк в части, не больше» (Lines per part, at most).

Unreviewed conflicts — The office warns about them but does not forbid the export. Check them in the «Конфликты» (Conflicts) section.

Boxes on unclosed pallets — They are exported without a pallet; once the pallet closes, export the shift again.

8. Frequently asked questions

The office shows fewer than the station — The station has not sent part of its scans yet: it keeps them while offline and sends them when the link returns. Check the station's link in the «Устройства» (Devices) section.

There is no «Закрыть» button — Only an active shift can be closed in the office. A planned shift is deleted instead (MKR-INS-08).

The export file is lost on the computer — Open the shift card, the «Выгрузки» (Exports) section, and click «Скачать» (Download): the host keeps every file.

New data arrived after the export — The shift is marked «Данные после закрытия» (Data after closing). Make the export again: the earlier one is out of date.

If your problem is not described above, contact Markiro support: hello@v-b.tech.
